

# Carat Weight

One carat equals 200 milligrams in weight.

For diamonds under one carat, each carat is divided into 100 points – similar to pennies in a dollar. 0.75 ct. = 75 points, 1/2 ct. = 50 points.

0.50 ct.

0.75 ct.

1.00 ct.

2.00 ct.

5.00 ct.

**Beauty and Its Beholder** The 4Cs provide a way to objectively compare and evaluate diamonds, but numbers alone can't describe a diamond's mysterious and captivating beauty – for that, you'll have to visit your local jeweller to see one for yourself.
